

Debrief Topic Map

Getting started with Debrief NG

This series of cheatsheets will guide you through creating your Debrief working environment, customising it according to your preferred file locations, and loading some analysis data. If you wish, you can widen this 'Welcome' panel to make the tutorials easier to read. You may also find it easier to work through these cheat-sheets if you make the bottom section of this pane taller by dragging the central 'grab' bar vertically upwards

Controlling what you view

This tutorial is going to get you started with some of the analysis functionality within Debrief.

Single Sided Reconstruction in Debrief

Before running through this cheat-sheet, you should really have completed the cheat-sheet, so you know how to configure Debrief and how to load your data.

If you haven't completed the Debrief walkthrough, click on at the top of this window (or select from the Help menu), navigate to the Tutorials tab, and start the Debrief walkthrough.

Walkthrough

This collection of cheat sheets will teach you how to use Debrief's Semi Automated Track Construction (SATC) capabilities.

If you have multiple monitors, you may wish to drag out this window to give you more room for the multiple Debrief windows that you will use later on.

And here's a sexy footer
